

Easy Upkeep of Your Car Comes in a Tube

(MS) — When you live in a country as beautiful as this, it's no wonder that driving is the great American pastime. Day trips, cross-country adventures, or around-town errands — the automobile has forged a lifestyle of unlimited mobility. We spend so much time in our cars, it makes sense to take the time to keep our “rides” in good condition. Oil changes, tune-ups, washing and waxing are part of owning an automobile, a truck or an RV.

But in spite of routine maintenance, time and travel eventually cause structural wear and tear. Rubber gaskets around the windows begin to crack. Upholstery develops rips or holes. Metal trim separates from the body, the side mirror gets snapped off, the plastic cup holder cracks ... some things on your vehicle may just fall off! Because these transportation workhorses are made up of every material we can imagine: metal, plastic, leather, rubber, wood, glass, and even paper, you will be surprised to learn that you can take care of most of these repairs yourself with just a one-part, all purpose adhesive, like E-6000® Automotive by Eclectic Products, Inc.

E-6000® Automotive adhesive is perfect for automotive repairs because it is easy to use right out of the tube and dries to a clear, flexible, rubbery consistency that withstands the vibration and movement of your vehicle. It has a unique ability to bond with superior strength to almost any material and is especially outstanding when bonding two different materials together, such as wood trim to a metal, fiberglass, plastic or vinyl dashboard. It will repair tears in cloth, vinyl or leather seats. Use it to resurface your pedals and rubber mats and reattach that side mirror, auto chrome or reflector. Because the adhesive is water-resistant, it's perfect for weather-stripping the head and taillights or mending canvas

Because your car is comprised of so many different materials, you need an all-purpose adhesive that can tackle just about any repair.

convertible tops. Since this versatile product is self-leveling, it also is useful for filling holes.

Protect your investment with E-6000® Automotive, essentially a “toolbox in a tube.” Look for it at AutoZone and True Value retail stores.
